SHOOTING SPORTS

Selecting JEO for your shooting sports needs is the best way to assure cost efficient and timely completion of your project that could grow your economy, benefit your youth with recreational activities, and improve your quality of life. Shooting sports continues to grow exponentially and JEO's staff can help provide a recreational facility that may increase participation and provide positive economic impact to your area. JEO's innovative and sustainable design methods produce results that are user friendly and flexible for the shooter that keeps them coming back. This drives revenue. To assist in obtaining needed funds for range development, JEO's community development staff provides grant writing and research.

Range improvement or new range development starts with consensus building and stakeholder participation, which will ensure the project moving forward. We help form and engage a stakeholder group that forms the core participants for the facility and as the project progresses this group becomes the leaders that make things happen. Once consensus building is done, JEO helps with funding strategies and a capital campaign to raise money for the project to complete design and construction.

The three most important aspects of shooting sports design are safety, sound, and environment. JEO's staff are accomplished shooters and designers. They know that safety is paramount to success. Shotgun sports are amongst the safest sports because of the high value that is placed on safety. JEO's innovative design includes provisions that can minimize sound and balance this with range needs. JEO's shooting sports specialists teach and compete in the games of sporting clays, trap, and 5-stand in addition to hunting and related outdoors activities. We like to think of JEO's planning, design, and construction as being 'for shooters, by shooters'.
